between specified locations in Liberia.

Liberian Climate

Liberia has a tropical climate. The average temperature throughout the country is about 27° C (81° F), with little variance throughout the seasons. In coastal areas, there is a nearly continuous breeze that eases the oppressiveness of the heat and humidity.

In general, relative humidity varies only a little—from 75–80% in the dry season to 80–85% in the wet season, can be as low as 50% or lower when a dry, dusty wind called a Harmattan blows from the Sahara. The Harmattan typically occurs between December and March.

The wet season is between late April and mid-November. Coastal areas receive about 510 cm (200 in.) of rain per year, and about 200 cm (80 in.) of rain fall per year in inland areas of the country.
